Aspects of 2d (0,2) supersymmetric gauge theories

The class of (0,2) gauge theories in two dimensions exhibit a very rich quantum dynamics, from dynamical supersymmetry breaking to low energy dualities. Due to their chiral nature, they generically flow to conformal fixed points. Moreover, as it turns out, the two dimensional conformal symmetry is strong enough to explicitly determine the fixed point theory. In this talk, I'll discuss various aspects of (0,2) theories.

Institut Henri Poincaré, salle 314, 3ème étage
