

Chers collègues, chers étudiants,

Le prochain Colloquium Pierre et Marie Curie aura lieu **le mardi 03 Décembre 2013 à 13h30, amphithéâtre Herpin (Esclangon, Jussieu)**.

Orateur : **Gerd Leuchs**, Directeur du Max Planck Institute for the Science of Light. Professeur aux département de Physique de l'Université Erlangen-Nuremberg (Allemagne) et de l'Université d'Ottawa (Canada)

Title : **Time reversal symmetry in optics**

Abstract : The presentation will start with an introduction to the general recipe for achieving optimum coupling of light to resonant optical material systems, such as Fabry Perot resonators, super- and sub-wavelength antenna structures. The extreme case for the latter is a single atom, which will be treated in detail. This coupling between light and a single atom is probably the most fundamental process in quantum optics. The best strategy for efficiently coupling light to a single atom in free space depends on the goal. If the goal is to maximally attenuate a laser beam, narrow-band on-resonance laser radiation is required as well as a wave front approaching the atom from a  $2\pi$  solid angle. If, on the other hand, the goal is to fully absorb the light bringing the atom to the excited state with unit success probability one will have to provide a single photon designed to represent the time reversed wave packet which the atom would emit in a spontaneous emission process. Among other conditions this requires the single photon wave packet impinging from the full  $4\pi$  solid angle and having the correct temporal shape. Any deviation from the perfect shape will reduce the efficiency. The state of the art is reviewed and the experimental progress is discussed. If the interaction is strong enough it will allow for building a few photon quantum gate without a cavity, with possible applications in quantum information processing such as a quantum repeater.

Toutes ces informations sont aussi disponibles sur la page <http://colloquium.ipthe.jussieu.fr/>  
Ces exposés sont destinés à un large auditoire d'étudiants -- en particulier de master ou en thèse --, d'enseignants et de chercheurs et je vous serais donc reconnaissant si vous pouviez diffuser cette annonce le plus largement possible.

L'exposé sera précédé à 13h00 par un café. Nous espérons vous voir nombreux !

Bien cordialement,

Alberto Bramati, Frédéric Decremps et Paul Windey
