Titre : *Parton-pseudo distribution functions from Lattice QCD*

Orateur : **Savvas Zafeiropoulos** (Heidelberg U.)

Résumé : *The light-cone definition of Parton Distribution Functions (PDFs) does not allow for a direct ab initio determination employing methods of Lattice QCD simulations that naturally take place in Euclidean spacetime. In this presentation we focus on pseudo-PDFs where the starting point is the equal time hadronic matrix element with the quark and anti-quark fields separated by a finite distance. We focus on Ioffe-time distributions, which are functions of the Ioffe-time ν , and can be understood as the Fourier transforms of parton distribution functions with respect to the momentum fraction variable x . We present lattice results for the case of the nucleon and we also perform a comparison with the pertinent phenomenological determinations.*
