SEMINAIRE du LPTHE

Mercredi 1 Fevrier 2023, 15:00

James Drummond

University of Southampton

Scattering amplitudes and their geometric properties

I will review a number of approaches to understanding properties of scattering amplitudes and their applications. I will then focus on the relation of the geometry of the kinematical space to the analytic behaviour of amplitudes as functions on this space. We will take planar $N=4$ super Yang-Mills theory as a guiding example, where cluster algebras of Grassmannian spaces play a central role. This suggests a number of directions for generalising to non-supersymmetric and non-planar cases.

Bibliothèque du LPTHE, tour 13/14, 4^{ème} étage
