## Seminaire de physique mathématique du CPHT, Ecole Polytechnique

**Jeudi 11 Fevrier 2016, 11 :45**

CPHT, Salle de conf Aile0

Domaines : hep-th

Titre : *On some generalizations of the Born-Infeld Theory*

Orateur : **Augusto Sagnotti**

Résumé : *Above and beyond its original motivations, the Born-Infeld theory plays an important role in connection with partial SUSY breaking. It also emerges naturally in String Theory, and its field equations afford an intriguing generalization of electric-magnetic duality to an interacting system. I shall elaborate on two types of Abelian multi-field extensions. The first is related to partial breaking and rests on the Antoniadis-Partouche-Taylor construction, while the second is related to dualities and rests on the Ivanov-Zupnik method.*
