Titre : *The inextendibility of the Schwarzschild spacetime as a Lorentzian manifold with a continuous metric*

Orateur : **Jan Sbierski (Cambridge, UK)**

Résumé : *The maximal analytic Schwarzschild spacetime is manifestly inextendible as a Lorentzian manifold with a twice continuously differentiable metric. In this talk I will describe how one proves the stronger statement that the maximal analytic Schwarzschild spacetime is inextendible as a Lorentzian manifold with a continuous metric. The investigation of low-regularity inextendibility criteria is motivated by the strong cosmic censorship conjecture in general relativity.*
