Domaines : hep-ph

Titre : *Listening for Invisible Axions*

Orateur : **Camila Machado (Mainz)**

Résumé : *Conventional approaches to probing axions and axion-like particles (ALPs) typically rely on a coupling to photons. If this coupling is extremely weak, ALPs are effectively decoupled from the Standard Model. However, ALPs may also couple to the dark photon of a hidden sector $U(1)$. We show that it is possible to probe such models via chiral gravitational waves sourced by an exponential production of the dark vector shortly after the ALP begins to oscillate.*
