Colloquium of the Physics Department of ENS

Mardi 25 Juin 2019, 17 :15

LPENS, Salle Jaures

Domaines : nlin

Titre : *Extracting Order from Disorder : Periodic Orbits Buried in Fluid Turbulence*

Orateur : **Rich Kerswell (DAMTP, University of Cambridge)**

Résumé : *Ideas from dynamical systems have recently provided fresh insight into transitional and weakly turbulent flows. Viewing such flows as a trajectory through a phase space littered with simple invariant ('exact') solutions and their stable and unstable manifolds has proved a fruitful way of understanding such flows. Central to this approach is identifying such exact solutions directly from turbulent flow data. I will discuss amongst other things recent attempts to harness Koopman operator theory in this quest.*
