Titre : *Probabilistic analysis of a discrete-time evolution in recombination.*

Orateur : **Servet Martinez (CMM Universidad de Chile, Santiago, CHILI)**

Résumé : *We study the discrete-time evolution of a recombination transformation in population genetics. The transformation acts on a product probability space, and its evolution is described by a Markov chain on a set of partitions that converges to the finest partition. We describe the geometric decay rate to this limit and the quasi-stationary behavior of the Markov chain when conditioned to the event that the chain does not hit the limit.*
