Titre : Goldstone Equivalence and High-Energy Electroweak Physics

Orateur : Andrea Wulzer (CERN & EPFL)

Résumé : Studying Electroweak processes at energies much above the Electroweak scale is of both practical and theoretical interest. I will introduce a formalism that allows to deal with the high-energy regime effectively thanks to manifest energy (and coupling) power-counting. This simplifies explicit calculations and allows to establish factorization theorems, as I will illustrate by proving tree-level collinear factorization and computing the corresponding splitting functions.
