String Theory in Greater Paris

Rencontres Théoriciennes
“Supergravité, théorie des cordes et théorie M”

Jeudi 11 Fevrier 2021, 11:00

Matthijs Hogervorst

EPFL Lausanne

Back to the future with the epsilon expansion

The epsilon expansion is a well-known framework in quantum field theory to construct weakly-coupled fixed points of the RG flow. Nevertheless, little is known about the landscape of theories it describes, beyond some well-known CFTs like the Ising and the $O(N)$ models. In this talk we revisit the problem of classifying multiscalar fixed points, in the process proving new results their spectra. Moreover, we show that there is no weakly-coupled gauged fixed point with fewer than 183 flavors.

Institut Henri Poincaré, salle 314, 3^{ème} étage
