Convergence of the Fefferman-Graham expansion and complex black hole anatomy

The AdS/CFT correspondence provides a map between data appearing in AdS gravity and CFT sources and one-point functions in the presence of sources. This data appears in a near-boundary expansion for asymptotically AdS spacetimes, the Fefferman-Graham expansion. In this talk I will discuss the large-order behaviour of the Fefferman-Graham expansion for black holes and holographic RG-flows. I will identify the physical features limiting its radius of convergence and discuss the causal structure appearing over multiple sheets of the complex Fefferman-Graham plane.

Institut Henri Poincaré, salle 314, 3^{ème} étage
