Mardi 23 Octobre 2012, 12 :00
CPHT, CPHT salle de conférence
Domaines : hep-th

Titre : *The Holographic Cotton Tensor*

Orateur : **Sebastian De Haro (Univ. of Amsterdam)**

Résumé : *After introducing the technique of holographic renormalization, I will focus on the case of self-dual four-dimensional geometries which are asymptotically locally AdS and discuss some of their holographic properties. I will show that the holographic stress energy tensor encoded in these geometries is the Cotton tensor of the conformal boundary geometry.*
